ASSIGNMENT 2

Build a python code, Assume u get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.

Python code:

```
import random
while(True):
    temp=random.randint(10,99)
    humid=random.randint(10,99)
    print("current temperature:",temp)
    print("current humidity:",humid,"%")
    temp_ref=37
    humid_ref=35
    if temp>temp_ref and humid<humid_ref:
        print("Sound Alarm")
    else:
        print("Sound off")
    break</pre>
```

OUTPUT:

```
import random
   2 while(True):
         temp=random.randint(10,99)
         humid=random.randint(10,99)
         print("current temperature:",temp)
         print("current humidity:",humid,"%")
         temp_ref=37
         humid_ref=35
         if (temp>temp_ref and humid<humid_ref):</pre>
            print("Sound Alarm")
  11 -
  12
            print("Sound off")
  13
         break
  15
V 💉 🔏
current temperature: 33
current humidity: 62 %
```

```
current temperature: 33
current humidity: 62 %
Sound off
